### ABSTRACT

Children in Indian culture have consistently been a theme less spoken or talked about. The reasons for this can be traced back to the socio-social foundation of the nation. On the planet youngsters are taken as the best blessing to mankind. Hence every general public connects its future to the current status of its children. The ramifications are enormous. Child labour can cause severe physical and emotional injury, as well as death. Slavery and sexual or economic exploitation are possible outcomes. In almost every case, it denies children access to education and health care, limiting their fundamental rights and jeopardizing their futures. Education is a right that everyone has. Technical and professional education must be widely available, and higher education must be open to everybody on a merit-based basis. I have used empirical study in this research. This empirical study includes a self tested questionnaire which contains yes or no questions and other choices accordingly by using the survey sampling method. The sample is 200. A few proposals gathered by the creator, from academicians and furthermore from the arrangement and plan records about the method of annihilating the issues, are summarized in the paper. At long last the layout of the arrangement and systems as recognized are likewise given with creator's proposals. The paper distinguishes that a great deal of strategy plans have been worked; however there is a critical requirement for a social development for this issue to truly get tended to and settled.

**KEYWORDS** : Child labour, Right to education, Poverty, exploitation , Literacy.

### INTRODUCTION :-

Children in Indian culture have consistently been a point less spoken or talked about. Children in each general public have consistently been taken as the best blessing to mankind. Youth is a significant phase of human improvement as it holds the possibility of the future advancement of any general public. Children who are raised in a domain, which is useful to their educated person, physical and social improvement proceed to be a dependable and profitable piece of the general public. On the off chance that we are to draw in the youngsters into work when they are excessively youthful for the assignment, we are

unduly reducing their current government assistance or their future salary procuring capacities, either by contracting their future outside decisions or by diminishing their future individual gainful abilities. By and large it is said that because of financial issues children are compelled to forego instructive and other advancement openings and take up employments which generally abuse them as they typically come up short on and occupied with dangerous conditions. Guardians send their child for an occupation as an urgent measure because of poor monetary conditions. It is hence no big surprise that the poor family units speak to the biggest section giver of child

work. One of the key parts of youngster work is that children are sent to work to the detriment of instruction. There is a solid impact of child work on school participation rates and the length of a youngster's work day is conversely connected with their ability to go to class. child work confines the privilege of youngsters to access and advantage from training and denies the major chance to go to class. Youngster work, in this way, biases children's training and furthermore unfavorably influences their wellbeing and security. Child labor is a pervasive hassle at some stage in the world, specially in growing international locations. Africa and Asia collectively account for over 90% of overall child employment. Child exertions is mainly popular in rural regions in which the capability to put in force minimalist age requirements for schooling and work is missing. Children work for an expansion of reasons, the most important being poverty and the brought about pressure upon them to get away from this plight. Though youngsters are not nicely paid, they nevertheless functionally primary participants to own family earnings in developing countries. Schooling issues also make a contribution to baby hard work, whether or not it's the inaccessibility of faculties or the shortage of fine education which spurs mother and father to enter their youngsters in extra profitable pastimes. Traditional elements consisting of rigid cultural and social roles in certain nations similarly restrict educational attainment and growth child labor. Working youngsters are the items of severe exploitation in phrases of toiling for long hours for minimal pay. Their painting conditions are mainly extreme, often no longer presenting the stimulation for correct bodily and intellectual improvement. Many of these youngsters endure lives of natural deprivation. However, there are issues with the intuitive answer of straight away abolishing child exertions to prevent such abuse. Child labor is a pervasive hassle at some stage in the world, specially in growing international locations. Africa and Asia collectively account for over 90% of overall child

employment. Child exertions is mainly popular in rural regions in which the capability to put in force minimalist age requirements for schooling and work is missing. Children work for an expansion of reasons, the most important being poverty and the brought about pressure upon them to get away from this plight. Traditional elements consisting of rigid cultural and social roles in certain nations similarly restrict educational attainment and growth of child labor. Working youngsters are the items of severe exploitation in phrases of toiling for long hours for minimal pay. Their painting conditions are mainly extreme, often no longer presenting the stimulation for correct bodily and intellectual improvement. Many of these youngsters endure lives of natural deprivation. However, there are issues with the intuitive answer of straight away abolishing child exertions to prevent such abuse. of society during their adult life. UNICEF definition of child labour is different. A child is involved in child labour activities if between 5 to 11 years of age, he or she did at least one hour of economic activity or at least 28 hours of domestic work in a week, and in case of children between 12 to 14 years of age, he or she did at least 14 hours of economic activity or at least 42 hours of economic activity and domestic work per week. UNICEF in another report says, "Children's work needs to be seen as happening along a spectrum, one end being destructive or exploitative work and beneficial work - promoting or enhancing children's development without interfering with their schooling, recreation and rest' being the other end. And between these two ends there are vast areas of work that may or may not negatively affect a child's development." This analysis results in positive implications for the global community. Further research into this situation is required earlier than calls are made for banning toddler exertions across the board. By establishing partnerships with humanitarian businesses, the global network can be aware of immediately fixing the remediable troubles of operating children.

### OBJECTIVES :-

- To ensure regular and systematic enumeration of all child labour.
- Institute a rights-based uniform definition of child labour and bonded child labour in existing labour laws.
- To expand the list of hazardous occupations to facilitate progressive elimination of all forms of child labour.

### LITERATURE REVIEW :-

The researcher said that the rights guaranteed to kids under the constitution remained only on paper (Haspels 2020). He explained how hundreds of kids paintings beneath atrocious situations in several elements of India, both exploited via their employers or tortured via the police (Office and International Labour Office, "Child Labour and Social Protection: International Standards, Concepts and Policy Frameworks", 2019). Another basic proper of a Child i.E., Child Health in India become scrutinized by way of Das & Dasgupta with recognize to immunization program (Cigno and Rosati, "Health Effects of Child Labour", 2018). Their evaluation cautioned a slackening of the preliminary thrust, which changed into a relay problem from the factor of view of Vaccine Preventable Diseases (VPDs). According to their estimates, the worst affected states in baby fitness are Bihar, Assam, Madhya Pradesh and West Bengal respectively on the premise of the wide variety of occurrences of VPDs like, DPT, Polio, BCG, and Measles (Cigno and Rosati, "Health Effects of Child Labour"; Office and International Labour Office, "Supplementary Material", 2018). On the other hand, the top acting states are Kerala, Tamil Nadu, Maharashtra and Punjab. Patra (2009) alternatively emphasized that health, being one of the most simple abilities, calls for a customary improvement free from gender bias (Cigno and Rosati, "Health Effects of Child Labour"; Office and International Labour Office, "Supplementary Material"; Office and

### International Labour Office, "Preliminary Material", 2017).

Using 21 decided on signs of health outcome (e.G., publish-neonatal loss of life, toddler death and prevalence of nutrients) and health seeking behavior (e.G., full immunization, oral rehydration therapy, fever, cough remedy and breastfeeding) he examined the fitness conditions of 29 states of India (Humbert, 2016). The look at unearths no continuously robust kingdom-clever pattern of gender bias against women children currently in India. However, excessive gender bias in infant fitness outcome in addition to health seeking behavior is seen in 3 Empowered Action Group of States (like Uttar Pradesh, Madhya Pradesh and Bihar) and in Andhra Pradesh, Punjab and Gujarat as properly (Office and International Labour Office, "Child Labour and Economic Vulnerability: Poverty and Shocks as Determinants of Child Labour", 2014). Kaul and Sarkar feel on the other hand dietary and academic care must be collectively required for a successful improvement of a toddler (Fassa et al., 2013). Comparing Child Development Indices of various states for the years 1993, 1999 and 2006, they discovered that the states which had already reached better ranges of toddler development advanced marginally, at the same time as states with very low primarily based signs (namely Bihar and Uttar Pradesh) progressed quicker (Mishra, 2012). The nutritional impact on baby improvement is also observed to be somehow related to their faculty training. Drez and Sen (2011) said that neglecting primary schooling, fitness care and social security by way of Indian planners simply welcomed imbalanced improvement and non-inclusive increase (Mishra; Office and International Labour Office, "Looking Forward: Mainstreaming Child Labour Concerns into Child-Sensitive Social Security Systems", 2011)

. Some commentators opined that malaise of baby labor and projects of popular enrollment are to be skillfully treated by means of the planners. Though there is no evidence in the

literature explaining that poverty result in the household to withdraw their wards from the schools and appoint them in paintings, however foremost families in India depend on child labour to catch up on income shocks and raise them out of poverty (Mishra; Office and International Labour Office, "Looking Forward: Mainstreaming Child Labour Concerns into Child-Sensitive Social Security Systems"; Cigno and Rosati, "Child Labour, Education, and Saving", 2010). Therefore, credit score availability has been discovered to play a pivotal function in switching the children from the labor market to schooling Jafarey. It found that long hours spent in place of work via the children have a destructive effect on their schooling. Thus a lot of the modern discussions in the literature hinges on the belief that there's a poor correlation between baby labor and infant education forcefully challenged this simplistic assumption by drawing the example of the state like Maharashtra in India (Mishra; Office and International Labour Office, "Looking Forward: Mainstreaming Child Labour Concerns into Child-Sensitive Social Security Systems"; Cigno and Rosati, "Child Labour, Education, and Saving"; Nangia, 2009). She has shown that Maharashtra has a high occurrence of infant labour and additionally an excessive stage of school attendance. Child fitness, increase, education and properly-being all these toddler improvement components can be stunted via another social curse, i.e., Child Abuse (Mishra; Office and International Labour Office, "Looking Forward: Mainstreaming Child Labour Concerns into Child-Sensitive Social Security Systems"; Cigno and Rosati, "Child Labour, Education, and Saving"; Nangia; Jaiswal, 2008). The recent have a look at on "Child Abuse: India 2007" highlights critical troubles of baby-abuse in Indian context. The study exhibits that male children are getting more abused on account that society does not have any shielding outlook in the direction of them compared to the female children, and furthermore they're

abused greater in the own family by using nearer cousins

(Mishra; Office and International Labour Office, "Looking Forward: Mainstreaming Child Labour Concerns into Child-Sensitive Social Security Systems"; Cigno and Rosati, "Child Labour, Education, and Saving"; Nangia; Jaiswal; Parker, 2008). The World Report on Violence and Health (2002) additionally iterated the same issues by pronouncing while abuse happens inside family; youngsters can rarely protest or report Indian Parliament has very these days authorised "The Protection of Children from Sexual Offences Bill 2011", which is said to be gender impartial and the weight of proof confers at the accused. (Office and International Labour Office, "Social Protection as a Policy Response to Child Labour: A Review of Evidence from Impact Evaluations", 2007). But mere paper legislation can't deliver a sea-trade in society. Without right governance and upgrading of health and educational facilities, those problems can not be tackled and without those parametric shifts no child development is viable. Contraventions of Child Rights have been incredibly visible in three spheres of the baby development process that critically have an effect on the future of their adulthood. These 3 enormous zones are Child Health, Child Labour & Child Education, and Child Abuse (Office and International Labour Office, "Social Protection as a Policy Response to Child Labour: A Review of Evidence from Impact Evaluations"; Humphries, 2004). This paper could deal with these three sections together and try to construct different baby improvement indexes in every section relying upon that. Regional variations in exceptional parameters of Child Development have discreetly been visible in India and the occasionally terrible performance of two to three states degrades the common situations of the complete nations. The versions can also often result in fascinating inference, when it's miles executed on gender basis and caste foundation (Office and International Labour Office, "Social Protection as a Policy Response to Child Labour: A Review

of Evidence from Impact Evaluations”;  
Humphries; Kirby,2000).

#### METHODOLOGY :-

I have used empirical study in this research. This empirical study includes a self tested questionnaire which contains yes or no questions and other choices accordingly by using the survey sampling method. The sample is 200. This paper depends on both primary and secondary data. The primary data for the present study is collected using sampling technique. Random sampling is used to collect the primary information from the respondents. A random (Veltman and Piper) samples selected from the study area to analyse the status of education system in India. The primary data which has been analysed using Frequencies, Chi-Square test and Crosstab method, Anova. The secondary data is collected from books, journals, articles and e-sources. The researcher has also utilized commentaries, books, treatises, articles, notes, comments and other writings to incorporate the various views of the multitude of jurists, with the intention of presenting a holistic view. The dependent variables are age and educational qualification.

#### HYPOTHESES:

##### H0:

There is no significant relationship between gender of the respondent and the what are all the problems faced by child labour in India.

##### H1:

There is a significant relationship between gender of the respondent and the what are all the problems faced by child labour in India.

#### ANALYSIS:

Figure 1

**Legend:** fig 1 represents the age group of the respondents for the question.

Figure 2

**Legend:** Fig 2 represents the gender of the respondents of the question.

Figure 3

**Legend:** fig 3 represents the education qualifications of the respondents.

Clustered Bar Percent of What are all the problems faced by child labour in India? by Gender of the respondents

**Legend:** Fig 7 represents the gender of the respondents through what are all the problems faced by child labour in India.

Figure 8

Clustered Bar Percent of One a scale of 1-10 rate the following statement-Right to education helps in reduction of child labour in India? [Good] by Educational Qualification

**Legend:** fig 8 represents the education qualifications through on scale 1- 10 rate the following statements right to education help in reducing of child labour in India.

**Figure 9**

**Legend:** fig 9 represents the marital status of the respondents through how can we stop child labour in India.

**Figure 10**

**Legend:** fig 10 represents the occupation of the respondents though do you agree that the right to education plays a key role in achieving social development in India.

## RESULTS:

**Figure 1** represents the age group of the respondents 18.9% and 19-30 years respondents 38.8% and 31-40 years respondents 23.4% of the respondents above 40 years responded 18.9%. **Figure 2** represents the 41.3% of the respondents are females and 58.7% of the respondents are males.

**Figure 3** represents the education qualification 17.4% Primary and 15.4% higher secondary and 34.3% UG And 25.9% post graduate and 7% of no formal education. **Figure 4** represents their marital status of respondents of which 60.7% were married and 39.3% were unmarried. **Figure 5** represents the occupation of the respondents 24.9% of the public sector and 10.4% of the private sector and 10.9% of students and 15.9% of self-employed and 37.8% of unemployed. **Figure 6** represents the age group of the respondents Below 18 years Were said 16.13% of social and economic backwardness And 19 to 30 years Were said 56.99% of lack of decent worker opportunity for adolescents and 31 to 40 years and the lack of access to quality education.

**Figure 7** represents the gender of the respondents Male said 36.56% said slavery And 20.3% of education of children and female said 5.38% affects education of children. 16.13% of male said respective habit like alcoholism and drug abuse. And 21.51% of Female destructive habits like alcoholism and drug abuse. **Figure 8** represents the education qualifications of the respondents Primary said 36.56% of 1 and Postgraduate boy said 20.43% said 2 Undergraduate 5.38% of 3 and higher secondary were 16.13% of 5. **Figure 9** represents the marital status of the respondents Unmarried said 36.56% of ensure education to all and 5.38% said create awareness among people and 16.13% of total government legislation and schemes And 20.43% supporting NGOs like save the children And 21.51% of unmarried said discouraging people to employ children in home shop. **Figure 10** represents the occupation of the respondents Public sector said 36.56% strongly disagree and employed 20.43% that disagree And 21.51% of unemployed agree And self-employed 21.51% said strongly.

## DISCUSSION:

**Figure 1** represents the age group of the respondents mostly 19-30 years were mostly responded because they might be the students who are the child labor and right to education in

India. In **Figure 2** respondents the sample frame of respondents of gender of male were mostly responded because they might be aware of the child labour in India. In **Figure 3** respondents the sample frame of respondents of education qualifications of UG were mostly responded because they might be aware of the child labour in India. In **Figure 4** respondents the sample frame of respondents of marital status of married were mostly responded because they might be aware of the right to education in India. In **Figure 5** respondents the sample frame of respondents of occupation of unemployed were mostly responded because they might be affected by lack of education. In **Figure 6** a majority of people belonging to age 19–30 have said lack of decent work opportunities as the reason for child labour in India. This might be because this age group people might not find the right job & they think that many children work as labour only for this. Other age groups have also said migration. This might be because when people change their location they need money for food. So the children work a labour for wages. In **Figure 7** represents the sample frame of the respondents of gender male were responded mostly because they might aware of the child labour and leads to slavery behind the reasons was the education of the children. It is the only thing child need in their life so male said leads to slavery and female also said mostly to destructive habits like alcoholism and drugs abuse because they might be aware of that. **Figure 8** represents the sample frame of respondents of the education qualifications of primary were mostly responded to the scale 1 because they might aware of the child labour in India and PG students also mostly responded to scale of 3 because they might aware of right to education of the childrens and compulsory basic education should have to gave to children will reduce child labour in India. In **Figure 9** a majority of married have said ensuring education for all can reduce child labour. This may be because married people completed education & they know the value of education.

Children when educated forget about labor & working for wages. They can develop professional skills through education. Many unmarried have also said efficient government schemes & role of ngo for reducing child labour. This is because they think that when the rules are stringent, violation of law would be less. So child labour practice may be reduced due to this. In **Figure 10** when combined majority of people have agreed & strongly agreed that right to education can increase social development. This is because many of the occupation people feel that education eradicates the evils from society. Education helps to abolish casteism in young minds, promote human values, and removes other harm from society. Education to the children is for creating a future stabilized society. So they feel that education not only improves the individual life but also on a whole contributes to social development.

#### LIMITATION:

Since the study was carried out in an industry within the urban limits it was difficult and hard to understand the mentality and the difficulties faced by workers of rural and semi-urban areas. Also lack of accessing previous studies on the same idea was a disadvantage.

#### CONCLUSION :-

A great document for eliminating child labour in India is the National Plan for Children 2005. The plan's objectives were to: 1. Eliminate child labour from dangerous occupations and work towards the total abolition of all forms of child labour. 2. To shield kids from all forms of commercial exploitation. A continual strategy must be used to end child labour in order to ensure that the issue is tackled from all angles. Eliminating child labour is undoubtedly an essential exercise; nevertheless, if the facts that contribute to children being employed as cheap labour and the causes that support its persistence are ignored, the exercise's efforts may be in vain. The issue of child laborers cannot be significantly improved until companies are involved.
