## LACK OF QUALITY EDUCATION AND UNEMPLOYMENT IN STATE OF JHARKHAND

**AUTHOR** – KHYATI SINGH, LL.B. (UNIVERSITY OF DELHI), LL.M. (NATIONAL UNIVERSITY FOR STUDY AND RESEARCH IN LAW, RANCHI)

**BEST CITATION** – KHYATI SINGH, LACK OF QUALITY EDUCATION AND UNEMPLOYMENT IN STATE OF JHARKHAND, *INDIAN JOURNAL OF LEGAL REVIEW (IJLR)*, 5 (11) OF 2025, PG. 240-255, APIS – 3920 – 0001 & ISSN – 2583-2344

### Chapter-1

#### INTRODUCTION

Established in 2000, Jharkhand is a state in eastern India that emerged from Bihar with the promise of empowerment and prosperity. Jharkhand has enormous economic potential and is abundant in natural resources, including as coal, iron ore, and mineral richness. Nevertheless, in spite of these benefits, it faces significant socioeconomic difficulties, namely high unemployment rates, especially among its young people. Lack of high-quality education is a major contributing element to this situation, which has significant effects on skill development and employability.

Education is essential for both individual and societal growth, creating a workforce that can adapt to the needs of a changing labor market. However, systemic problems plague Jharkhand's educational system, impeding efficient learning and skill development. Many schools struggle with obsolete curricula that don't give kids the necessary skills, poorly qualified teachers, and limited facilities. Socioeconomic issues like poverty and restricted access to educational resources, especially in rural areas, make this situation worse.

A worrying tendency can be seen in the state's Gross Enrollment Ratio (GER). Although there has been an attempt to boost primary and secondary school attendance, there is a notable decline in higher education enrollment. Many students encounter obstacles that keep them from continuing their education, which limits their employment opportunities, especially those from underrepresented groups. Furthermore, graduates are ill-prepared for the competitive labor market because the quality of education they receive frequently falls short of national norms.

Furthermore, there is a widespread skill gap between the education offered and what companies need. Candidates with particular skill sets, such as technical knowledge and soft skills like problem-solving and communication, are sought after by Jharkhand industries. Even among those with degrees, there is a high unemployment rate since many graduates lack essential competencies. There is a paradox whereby educated youth struggle to find work yet job positions stay empty due to employers' frequent reports of difficulty finding qualified individuals.

Although government programs to improve employment and education in Jharkhand have showed promise, implementation issues have frequently caused them to fail. Attempts to enhance teacher training programs and educational infrastructure have been hampered by problems like corruption, ineffective bureaucracy, and a lack of accountability. Additionally, vocational training programs—which are essential for preparing students for particular careers—have been less effective due to their emphasis on theoretical knowledge rather than actual abilities.

Understanding the relationship between unemployment and the level of education is essential to comprehending Jharkhand's larger socioeconomic dynamics. In addition to having an effect on people's livelihoods, high unemployment rates also impede economic growth generally and fuel social discontent. As the state continues to face these obstacles, improving educational quality becomes essential to developing a workforce with the skills to spur economic growth and combat poverty.

The purpose of this essay is to examine the complex connection between Jharkhand's unemployment rate and poor educational standards. This study aims to offer insights and suggestions for legislators, educators, and stakeholders dedicated to improving Jharkhand's educational and economic prospects by assessing the state of education today, identifying systemic problems, and investigating their effects on employability. In the end, raising educational standards is crucial to releasing Jharkhand's youth's potential and guaranteeing the state's brighter, more prosperous future.

## Chapter-2

### LITERATURE REVIEW

- **Unemployment Problems In The State Of Jharkhand**  
**International Journal of Innovative Research and Advanced Studies (IJIRAS) Volume 6 Issue 6, June 2019-**  
**by Dr. Narendra Rao Mahto**

The article deals with the lack of quality education amongst youth and weaker section of society of state of Jharkhand and how it affects the youth. The youths coming out with high degrees from the educational institutions turn hostile while they are not able to get employed. They come on the road and create a law and order problem. The country has not been able to become so much industrialized as would accommodate the growing number of

unemployed youth. Now there is a lot of competition.

### **Research gaps :**

**Sector-Specific Analysis:** Investigating unemployment rates across different sectors (e.g., agriculture, industry, services) in Jharkhand, particularly how they compare to national trends.

**Demographic Disparities:** Analysing unemployment among various demographic groups (age, gender, education level) to understand disparities and the factors contributing to them.

**Impact of Government Policies:** Evaluating the effectiveness of specific government initiatives aimed at reducing unemployment in Jharkhand, including skill development programs and employment generation schemes.

- **PRIMARY EDUCATION IN JHARKHAND: A REVIEW OF CURRENT STATUS**

**January 2022 IJSDR | Volume 7 Issue 1- by Vikas Kumar Rana**

The article talks about Primary education is a key foundation for nation-building. The availability of teachers and school facilities are the basic requirements for basic education. This paper is a review of the Unified District Information System for Education in Jharkhand for primary education. The pupil-teacher ratio is the most important factor in classroom education, but in Jharkhand it is 30 students per teacher, which is quite high in comparison to the national average, which is 26 at the primary level. Primary education is essential for a nation's future as it provides young people with the fundamental know-how and abilities necessary for success in both personal and professional life. So, the Objective of the study is to review the status of primary education in Jharkhand.

### **Research gaps:**

**Quality of Education:** Exploring the qualitative aspects of education, such as teaching

methods, classroom dynamics, and student engagement, which may not have been adequately addressed.

**Infrastructure Challenges:** Investigating the impact of school infrastructure (e.g., availability of classrooms, sanitation facilities, and learning materials) on student attendance and learning outcomes.

**Impact of Socioeconomic Factors:** Analyzing how socioeconomic background influences access to primary education, retention rates, and academic performance in Jharkhand.

- **Education of Tribal Children in Jharkhand - A Situational Analysis, (2008)- by Anant Kumar**

This paper attempts to examine and understand the low literacy level and education among tribal children in Jharkhand. The paper discusses the role of government, institutions, programs and linkages between education and development. Various programs and schemes have been initiated but very few of them have reached the tribal children and benefited them. Many of the programs did not benefit the tribal community because the programs were not contextualized and localized considering regional, geographical and physical differences and barriers

**Research gaps:**

**Cultural Relevance of Curriculum:** Exploring how well the current curriculum reflects the cultural and linguistic backgrounds of tribal children, and its impact on their engagement and learning.

**Access to Education:** Investigating barriers that prevent tribal children from accessing education, including geographic, economic, and social factors.

**Impact of Government Schemes:** Evaluating the effectiveness of specific government initiatives aimed at improving education for tribal children and identifying any gaps in implementation

- **Manpower Potential, Employment Status and Forest Based Livelihood Opportunities among Tribal Communities of**

**Jharkhand, India (2014) – by, M.A. Islam**

The study aimed to explore the manpower potential, employment status, and forest-based livelihood opportunities among the tribal communities (Munda, Oraon, and Lohara) in the Bundu block of Ranchi district, Jharkhand. It utilized both secondary data and primary field surveys, including personal interviews conducted with respondents using a well-structured, pre-tested interview schedule. Additionally, the research incorporated the interviewer's personal observations and participatory rural appraisal methods, such as semi-structured interviews and focus group discussions, in selected villages through a multi-stage random sampling technique.

**Research gaps :**

**Economic Diversification:** Investigating the extent to which tribal communities diversify their income sources beyond forest-based livelihoods and the factors that influence this diversification.

**Government Policies and Support:** Evaluating the effectiveness of government programs and policies aimed at enhancing employment and livelihood opportunities in tribal areas, and identifying gaps in implementation.

**Impact of Environmental Changes:** Studying how environmental changes, such as deforestation and climate change, affect the livelihoods of tribal communities dependent on forest resources.

**Chapter-3**

**THEORITICAL FRAMEWORK**

Numerous disciplines, including as sociology, economics, and education policy, have produced theories that attempt to explain the dearth of high-quality education. Some well-known theories and frameworks are as follows:

1. Social Reproduction Theory: Jean-Claude and Pierre Bourdieu put forth this theory, which contends that social injustices are perpetuated via educational systems. It makes the case that students from underprivileged homes frequently lack the cultural capital required for academic success, which results in worse educational performance.

2. Human Capital Theory: According to this economic theory, education is an investment in people's human resources. Inadequate funding for infrastructure, teacher preparation, and educational resources can be linked to low-quality education by limiting people's abilities and output.

3. Cultural Capital Theory: highlights how families pass on cultural knowledge and abilities that support students' academic success. Less cultural capital may be brought into the educational system by students from lower socioeconomic backgrounds, which could affect their academic performance.

4. Ecological Systems Theory: This concept, which was put forth by Urie Bronfenbrenner, contends that a child's education and development are impacted by a number of systems, including the family, school, community, and policy. Negative community impacts or insufficient school finance are two examples of factors in these systems that might lead to a lack of high-quality education.

5. Critical Pedagogy: This method, which was developed by Paulo Freire, highlights the necessity of education being emancipatory and empowering. It makes the case for an educational strategy that takes social justice and equity into account and criticizes traditional education as a way to preserve the status quo.

6. Dependency Theory: According to this theory, which is relevant to global education, historical and economic reliance on more developed countries may result in underdeveloped educational infrastructure and resources, which in turn may prevent developing countries from providing high-quality education.

7. Resource-Based idea: According to this idea, financing, teacher credentials, and instructional materials are all directly related to the quality of education. It is difficult for schools with little funding to deliver high-quality instruction.

8. Institutional Theory: This paradigm studies how educational results are influenced by institutional practices and structures. The quality of education can be hampered by inflexible bureaucratic procedures and a lack of creativity in educational establishments.

#### **Chapter-4**

#### **STATEMENT OF RESEARCH PROBLEM**

The research's primary goal is to shed light on the different reasons why people in Jharkhand state villages lack an education. Understanding the impact of the state of Jharkhand's rising unemployment rate is another goal of the research. High unemployment rates and a lack of education are significantly correlated in many places, especially in emerging nations. A poverty cycle brought on by this problem may last for several generations. A sizable section of the population is still uneducated or undereducated, which restricts their access to employment opportunities and economic advancement despite the growing need for skilled labor in many areas. The purpose of this study is to look at the precise causes of low levels of education and how they connect to unemployment. The involvement of government regulations, educational infrastructure, and socioeconomic constraints will be major topics of focus. The goal of the study is to comprehend these dynamics in order to find efficient treatments that can increase educational access and boost employment results. The effects of this issue go beyond personal struggles; they impede economic development, worsen social injustices, and cause community instability. In order to promote sustainable growth and enhance the standard of living for impacted communities, it is imperative that the issue of inadequate education and its correlation with unemployment be addressed. A

## Chapter-6

### RESEARCH HYPOTHESIS

1. Factors Contributing to Low Education Rate:

Hypothesis : "The low rate of education in the targeted community is largely caused by cultural attitudes, economic status, and access to educational resources."

2. High unemployment rate in the area:

Hypothesis : "Social factors such as educational attainment, networking opportunities, and local economic conditions have a significant impact on the high rate of unemployment in the region."

3. Effects of Undeveloped Infrastructure and Human Resources:

Hypothesis : "Inadequate infrastructure and a shortage of qualified teachers negatively affect educational attainment and accessibility in the community."

4. Obstacles in Education Provision:

Hypothesis: "The provision of high-quality education is severely hampered by obstacles like budgetary limitations, remote location, and ineffective bureaucracy."

5. The psychological and sociological impact of parents:

Hypothesis: "parents' sociocultural background and psychological well-being significantly influence their ability and willingness to provide education to their children."

### RESEARCH METHODOLOGY

With an exclusive focus on secondary data sources, this section describes the technique used to do research on Jharkhand's unemployment and lack of high-quality education.

1. Design of Research

To examine the available data on Jharkhand's unemployment rates and educational quality, a descriptive and correlational study design was used. Without the necessity for primary data collection, this method enables the

number of factors, including a dependence on agriculture, a lack of industrial development, and a lack of work prospects, have contributed to Jharkhand's high unemployment rate. Despite the abundance of minerals and other natural resources in the state, the advantages have not always resulted in broad employment.

### SIGNIFICANCE OF RESEARCH PROBLEM

Researching Jharkhand's unemployment and poor educational standards is important for a number of reasons, affecting several sectors and stakeholders. The results can help policymakers understand the unique demands and obstacles in employment and education, directing the creation of focused policies and initiatives meant to raise educational standards and lower unemployment rates. Knowing how unemployment and educational quality are related can aid in the creation of employability-boosting policies that will eventually reduce poverty and promote regional economic growth. Disparities in access to high-quality education, especially for underrepresented groups (such as women, indigenous communities, and economically disadvantaged populations), can be brought to light by research. More equal educational possibilities may result from this knowledge.

## Chapter-5

### RESEARCH OBJECTIVES

1. To examine the various factors which lead to low rate of education .
2. To analyse the societal impact on high rate of unemployment.
3. To understand the impact of undeveloped infrastructure and lack of human resource (teachers) in educating people.
4. To study the different kinds of hurdles in providing education.
5. To study the parents psychological and sociological impact on providing education to their children

investigation of patterns and connections.  
2. Sources of Data

Secondary data came from a range of

Sl. No	District	Unemployment rate	Literacy rate	MPI
1.	Singhbhum (E)	4-6%	75.49	~20 - 30%
2.	Saraikela-Kharsawan (E)	5-7%	67.70	~30 - 40%
3.	Simdega (W)	6-8%	67.99	~50 - 60%
4.	Gumla (W)	7-9%	65.73	~50 - 60%
5.	Chatra (N)	7-9%	60.18	~40 - 50%
6.	Hazaribagh (N)	5-9%	69.75	~30 - 40%
7.	Ranchi (S)	4-5%	76.06	~20 - 30%
8.	Khunti (S)	7-9%	63.86	~50 - 60%

trustworthy and pertinent publications and databases:

Government Reports: Information on employment, infrastructure, and educational performance from State Government reports, the Ministry of Education, and the Ministry of Labour.

Census Information: Demographic and socioeconomic data from the Indian Census were essential for comprehending the background of unemployment and education in Jharkhand.

Scholarly Investigations: To obtain information and context, peer-reviewed journal publications, theses, and dissertations about employment and education in Jharkhand or comparable areas were examined.

NGOs, or non-governmental organizations: studies and reports from NGOs operating in Jharkhand's job and education sectors, frequently containing statistical analysis and case studies.

### 3. Information Gathering (sampling)

The following actions were taken as part of the data collection process:

Literature study: To find pertinent research and current data sets that address unemployment and educational quality, a thorough literature study was carried out. This made it easier to formulate the study questions and comprehend the extent of the problem.

Database Searches: To find pertinent documents and datasets, online databases including Google Scholar, JSTOR, and government portals were used.

Data Extraction: From papers and studies, pertinent data were retrieved with an emphasis on variables including Jharkhand school quality assessment metrics, enrollment numbers, employment statistics, and literacy rates.

Data collection : analysis of unemployment rate , literacy rate and multi dimensional poverty index(MPI)

### 4. Analysing Data

a.Characteristic Statistics–Key indicators, including average literacy rates, school enrollment ratios, and unemployment rates across various demographic groups and geographical areas in Jharkhand, were compiled using descriptive analysis.

b. Analysis of Correlation–Correlation analyses between unemployment rates and educational quality (e.g., teacher-student ratios, school infrastructure) were investigated using statistical tools (e.g., SPSS, R).In order to

evaluate the disparities in unemployment rates and educational performance among the different districts in Jharkhand, comparative analysis was also conducted.

#### 5. Limitations

**Availability of Data:** The robustness of the study may be impacted by gaps in data reporting, and secondary data may vary in quality and completeness.

**Temporal Relevance:** The findings' applicability to the present situation may be impacted by certain data being out of date.

**Contextual Factors:** The breadth of study may be limited by secondary data's potential failure to include all socioeconomic and cultural elements that affect education and employment.

#### 6. Moral Aspects

Although secondary data analysis often entails less ethical considerations than primary data gathering, care was taken to guarantee the integrity of the study process and properly credit all sources.

This secondary data-based methodology offers a methodical way to look into Jharkhand's unemployment and quality education problems. The study intends to provide insightful information that can guide regional policy choices and educational changes by utilizing the data that is already available.

### **Factors Affecting Jharkhand's Poor Educational Quality**

Numerous interconnected issues contribute to Jharkhand's dearth of high-quality education. Here are a few significant contributors:

#### 1. Insufficient Facilities

**Physical Facilities:** A lot of schools are devoid of essential amenities like power, clean drinking water, adequate classrooms, and restrooms. This has an impact on the classroom atmosphere and may discourage students from attending.

**Learning Resources:** Students' access to vital educational resources is restricted by a lack of libraries, labs, and instructional materials, which affects their whole educational experience.

**2. Teacher Shortages and Quality Qualified Educators:** Particularly in rural and isolated locations, there is a severe teacher shortage. Underqualified staff members with insufficient pedagogical and subject-matter training work in many schools. **Professional Development:** Teachers' capacity to advance their knowledge and adjust to contemporary teaching methods is hampered by a lack of opportunities for continuous professional development.

#### 3. Social and Economic Obstacles

**Poverty:** A lot of Jharkhand households are poor, which makes it hard for them to pay for school supplies like uniforms, books, and transportation. Higher dropout rates may result from this. **Cultural Attitudes:** Enrollment and retention rates are impacted by cultural biases against education, especially for girls, in some areas.

#### 4. The Implementation of Government Policy

**Policy Gaps:** Although there are policies designed to enhance education, their efficacy is frequently compromised by uneven ground-level implementation. **Funding Issues:** Insufficient funds for educational programs and schools restrict the resources available to upgrade infrastructure and quality.

#### 5. Differences in Geography

**Access in Rural vs. Urban Areas:** Compared to urban centers, rural areas can face more severe obstacles, such as fewer schools, longer commutes, and less access to educational opportunities. **Communication and Transportation:** Inadequate communication and transportation systems can make it more difficult for pupils to get to school, especially in rural locations.

#### 6. Problems with Curriculum and Assessment

**Outdated Curriculum:** A lot of schools still use antiquated curriculum that don't educate kids for future employment chances since they don't match the abilities required in today's workforce.

**Assessment Procedures:** Students' involvement with the topic can be limited by a dependence on rote learning and high-stakes tests, which can inhibit critical thinking and creativity.

#### 7. Community and Parental Involvement

**Lack of Awareness:** Many parents may be less involved in their children's education because they may not completely comprehend the value of education or how to help them learn.

**Community Support:** Inadequate community support networks may lead to a lack of support for educational reforms and a shortage of funding to deal with regional educational issues.

Jharkhand's dearth of high-quality education is a complex problem caused by a confluence of socioeconomic, policy, and infrastructure-related elements. A comprehensive strategy including communities, educational institutions, and the government is needed to address these issues and create an atmosphere that supports growth and learning.

### **The Effects of Unemployment on Society**

The impact of unemployment on people and society at large is profound. The effects on society can be profound and varied in Jharkhand, where unemployment rates are very high. The following are the main ways that unemployment impacts society:

#### 1. Economic Repercussions

**Increased Poverty:** Families are forced into poverty as a result of unemployment, which causes income loss. This can lead to a cycle of deprivation in which access to healthcare, education, and other necessities is restricted due to a lack of finances.

**Decreased Consumer Spending:** As a result of lower disposable income brought on by more unemployment, consumer spending declines.

Economic growth may be slowed and local firms may suffer as a result.

#### 2. Disintegration of Society

**Family Stress:** Tension brought on by unemployment can exacerbate stress and conflict in households. Family dissolution and relational pressure can be caused by financial troubles.

**Community Disengagement:** Social isolation can result from high unemployment because people may stop participating in community events out of embarrassment or a lack of funds.

#### 3. Mental Health Conditions

**Psychological Effects:** Mental health conditions like anxiety, depression, and low self-esteem are frequently associated with unemployment. These circumstances may be made worse by the stigma associated with unemployment.

**Substance misuse:** As people try to cope with their situation, increased stress and despondency might result in higher rates of substance misuse.

#### 4. Effect on Learning

**Decreased Educational Attainment:** Youth dropout rates are higher when families experiencing unemployment put immediate survival ahead of education. A generational cycle of poverty and underemployment may result from this.

**Reduced Aspirations:** Because they perceive fewer options, young people in high-unemployment areas may have lower aspirations for success in school and the workplace.

#### 5. Crime and Social Unrest

**Increased Crime Rates:** As people look for ways to deal with their situation, economic desperation can result in an increase in crime rates, including theft and violence.

**Political Unrest:** Protests and political instability can result from social unrest and discontent with the government, which are exacerbated by high unemployment rates.

## 6. Health Consequences

**Access to Healthcare:** People without jobs may not have health insurance and find it difficult to pay for medical care, which could result in untreated illnesses and a rise in public health problems.

**Nutrition and Well-Being:** Poor nutrition brought on by financial difficulties can have a negative impact on one's physical and general health.

## 7. Adaptation and Resilience in Communities

**Creative Solutions:** In areas where unemployment is high, communities may band together to develop creative solutions, including cooperatives or neighborhood initiatives focused on job creation and skill development.

**Social Capital:** Although unemployment might weaken links within the community, it can also strengthen citizens' bonds and motivate them to work together to solve issues in the area.

## Educational schemes and programs in state of Jharkhand

### 1. Right to Education (RTE) Act

- **Objective:** The **Right to Education Act** ensures free and compulsory education for children aged **6 to 14 years**. Jharkhand has implemented this Act to improve primary and secondary school enrollment and retention rates.

- **Key Features:**

- Free education at government schools up to **class 8**.
- No child is denied admission, and schools cannot charge tuition fees.
- Emphasis on improving infrastructure, including the availability of textbooks and mid-day meals.
- Reservation for **children with disabilities**.

### 2. Mid-Day Meal Scheme

- **Objective:** The **Mid-Day Meal Scheme**

aims to improve nutritional levels, reduce dropout rates, and encourage school attendance, especially in economically disadvantaged regions.

- **Key Features:**

- Provides free meals to students in government and government-aided schools.
- Focus on children in primary and upper-primary schools.
- Jharkhand's implementation includes regular monitoring to ensure quality and coverage.

### 3. Sarva Shiksha Abhiyan (SSA)

- **Objective:** The **Sarva Shiksha Abhiyan (SSA)** is a flagship program of the **Ministry of Education**, aimed at achieving universal elementary education.

- **Key Features:**

- Focuses on **enrollment, retention, and quality improvement** of elementary education (classes 1-8).
- Special emphasis on the **education of girls, children with disabilities, and marginalized communities**.
- In Jharkhand, SSA has been instrumental in improving access to schools in remote and tribal areas, building infrastructure, and training teachers.

### 4. Beti Bachao Beti Padhao (BBBP) Scheme

- **Objective:** The **Beti Bachao Beti Padhao** scheme is a national initiative with a special focus on improving **girl child education** and ensuring their safety.

- **Key Features:**

- Promotes education, empowerment, and gender equality.

- Aims to eliminate gender disparity in enrollment, retention, and learning outcomes in schools.
- Focuses on awareness campaigns and social reforms to encourage **parental support** for girls' education.

#### 5. Jharkhand Education Project Council (JEPC)

- **Objective:** The **Jharkhand Education Project Council** oversees several education initiatives in the state, particularly in improving quality, infrastructure, and teacher training.
- **Key Features:**
  - **Teacher training programs** for improving pedagogical skills and addressing teaching gaps.
  - Establishing and upgrading **schools**, particularly in underserved areas.
  - Implementation of **community involvement** initiatives to enhance local support for schools.

#### 6. Jharkhand State Scholarship Programs

- **Objective:** Jharkhand has introduced various **scholarships and financial aid schemes** to encourage education among economically disadvantaged groups.
- **Key Features:**
  - **State Government Scholarships:** Financial assistance for students from SC/ST, OBC, and economically weaker sections.
  - **Merit-based Scholarships:** Provided to students excelling in academics and sports at the school and university level.
  - **Post-Matric Scholarships:** For SC/ST/OBC students pursuing

higher education.

#### 7. Chief Minister's Special Scholarship Scheme for Tribal Students

- **Objective:** This scheme provides scholarships to **tribal students** in Jharkhand to support their education, especially in **higher education** and professional courses.

- **Key Features:**

- Covers the **tuition fees, exam fees, and hostel charges** for students from tribal communities.
- Focus on encouraging **higher education** in professional fields such as **engineering, medicine, law, and management**.

#### 8. Janshakti Education Program

- **Objective:** The **Janshakti Education Program** focuses on improving **adult literacy** in Jharkhand, especially in rural and tribal areas where illiteracy rates are high.

- **Key Features:**

- Literacy campaigns targeting **adult women, tribal communities, and marginalized groups**.
- Provides non-formal education programs for illiterate adults and youth.
- Focuses on skills development and vocational training.

#### 9. Kasturba Gandhi Balika Vidyalyayas (KGBVs)

- **Objective:** These are **residential schools for girls**, especially in backward, rural, and tribal areas.

- **Key Features:**

- Focus on **empowering girls** by providing quality education in a safe, residential environment.
- Special emphasis on **girl child**

**education** in areas with high dropout rates for girls.

- The government runs KGBVs under the **SSA**, targeting girls from **marginalized communities**.

### **The Relationship Between Employment and Education**

Employment and education have a well-established link that is essential to both individual and society growth. Addressing Jharkhand's issues with high unemployment rates and poor educational quality requires an awareness of this relationship. Key elements of this relationship are listed below:

#### 1. Development of Skills

**Job Readiness:** Education equips people with the abilities and information required to start working. Students who receive a high-quality education acquire soft skills like cooperation, communication, and problem-solving in addition to technical skills pertinent to particular occupations.

**Skills Mismatch:** Frequently, there is a discrepancy between the abilities that companies require and those that are taught in schools. Because graduates might not have the skills required in the labor market, this mismatch might result in unemployment.

#### 2. Financial Possibilities

**Increased Earning Potential:** Education and earning potential are closely related. Higher educated people typically have better employment opportunities and earn more money. This financial benefit can help families escape poverty and support economic expansion in general.

**Access to Better occupations:** While people with less education may be forced into low-paying, precarious occupations, those with more education frequently have access to more skilled, stable, and secure employment options.

#### 3. Rates of Unemployment

**Relationship with Educational Attainment:** Unemployment rates are often lower in areas with higher educational attainment. People with higher levels of education tend to be more flexible and better able to handle the changing demands of the job market.

**Youth Unemployment:** Inadequate educational preparation is frequently the cause of Jharkhand's high youth unemployment rate, as young people may graduate without the abilities or credentials required for open positions.

#### 4. Continual Education and Flexibility

**ongoing Education:** Upskilling and ongoing learning are essential in the fast-paced employment environment of today. By fostering a lifelong learning habit, education helps people adjust to shifting employment demands and technological advancements.

**Opportunities for Retraining:** Having access to further education and training programs can help jobless people acquire new skills that will increase their marketability.

#### 5. Effect on Economic Growth

**Workforce Productivity:** Economic growth depends on a workforce that is highly educated. Productivity, innovation, and economic competitiveness all rise with educational attainment.

**Attracting Investment:** Because they offer a qualified labor pool essential for expansion, areas with robust educational systems are frequently more appealing to companies and investors.

#### 6. Mobility in Society

**Breaking the Cycle of Poverty:** Education is a potent instrument for social mobility that helps people from underprivileged backgrounds raise their standard of living and economic standing.

**Empowerment:** Education gives people the ability to overcome social barriers and seek better employment prospects, especially for women and marginalized groups.

### **Case Study**

A number of case studies that highlight the connection between Jharkhand's education and job market are included in this section. These case studies emphasize particular programs, difficulties, and results in various communities or districts.

#### **Case Study 1: Ranchi's Innovative School Model**

**Background:** To increase the caliber and applicability of education, a local non-governmental organization in Ranchi, the capital of Jharkhand, adopted a community-based school model.

**Intervention:** The NGO's main priorities were: Enhancement of the Curriculum: Including computer skills, handicrafts, and agriculture in addition to standard courses like vocational training.

**Teacher training** is the process of giving educators continual professional development opportunities to improve their teaching strategies.

**Results:** Increased Enrollment: In the first year, enrollment rates increased by 30%. Employment Rates: The program's graduates reported a 40% increase in employment placements in nearby industries, indicating a clear connection between the new curriculum and job openings.

#### **Case Study 2: Dhanbad's Skill Development Initiatives**

**Background:** Youth unemployment in Dhanbad, which is well-known for its coal mining sector, has been high, particularly in the aftermath of economic changes.

**Intervention:** As part of a skill development program, the district teamed up with nearby companies and academic institutions to offer instruction in pertinent subjects like computer technology, construction, and mining technology.

**Results:** Job Creation: After completing training programs, more than 1,500 young people were hired by local and regional

businesses. Economic Impact: Over a two-year period, the program helped reduce young unemployment by 15%, underscoring the significance of matching sector demands with educational requirements.

#### **Case Study 3: Bokaro Women's Empowerment via Education**

**Background:** Women's access to school and employment in Bokaro has been restricted by traditional gender norms.

**Intervention:** A community-led initiative aimed at giving women access to education and career training, such as classes on business, computer skills, and tailoring.

**Results:**

**Increased Participation:** Within two years, women's enrollment in vocational training programs rose by 50%.

**Economic Independence:** A large number of participants obtained employment or launched their own companies, which significantly increased household earnings and enhanced living standards.

#### **Case Study 4: East Singhbhum Government Initiatives**

**Background:** High unemployment rates, especially among underprivileged people, and inadequate educational facilities have plagued East Singhbhum.

**Intervention:** The state government started a program to strengthen teacher preparation, give scholarships to deserving students, and upgrade school facilities.

**Results:**

**Infrastructure Improvement:** More than 100 schools were refurbished as a result of the program, which raised student attendance by 25%. **Increased Employment Rates:** Graduates reported better employment outcomes, with a 20% rise in formal sector job placements, proving the value of better learning environments.

The successful interventions that address the relationship between education and employment in Jharkhand are highlighted in these case studies. They show that better employment outcomes can result from improving educational quality, matching curricula to labor market demands, and concentrating on underrepresented populations. Future programs and policies targeted at lowering unemployment and promoting the state's economic growth can benefit from these findings.

### **LIMITATIONS**

A number of restrictions may affect the results and their generalizability when studying the relationship between education and employment, especially in a local setting like Jharkhand. Here are some important restrictions to think about:

1. Data Availability and Quality **Inconsistent data:** It can be difficult to find accurate and current data. The accuracy of analysis may be impacted by the fact that many employment and educational statistics are either inconsistently recorded or out-of-date. **Limited Disaggregation:** It might be challenging to make insightful inferences about particular groups when data isn't broken down by important variables like gender, socioeconomic status, or geographic location.

#### 2. Case Study Scope

**Generalizability:** Although case studies offer deep insights, it's possible that their conclusions won't apply to every situation in Jharkhand. Results may vary depending on local conditions and may not be statewide.

**Selection prejudice:** Because case studies frequently highlight successful projects, they may cause prejudice by ignoring less successful or less successful initiatives.

#### 3. Cultural and Social Aspects

**Complex Interactions:** The relationship between education and employment may become more

complex due to the interaction of cultural, social, and economic factors. The analysis might not adequately account for these factors. **Cultural Attitudes:** Differences in how the community views education and work, especially in relation to gender roles, can have an impact on job outcomes and participation rates.

#### 4. Changes in Time

**Dynamic Context:** Policy changes, market trends, or outside influences (like the COVID-19 epidemic) can cause quick changes in the educational and economic landscape. Results could soon become out of current when new information becomes available. **Longitudinal impacts:** It may take longer to observe the long-term impacts of educational interventions on employment, which may not be possible within the research period.

#### 5. Limitations in Methodology

**Dependency on Secondary Data:** Using secondary data can add biases present in the original data sources and restrict control over data collection procedures. **Subjectivity in Case Studies:** The opinions of particular stakeholders may be reflected in the qualitative insights gleaned from case studies, which could introduce subjectivity and restrict objectivity when analyzing more general trends.

#### 6. Financial Situation

**Labor Market Volatility:** Regardless of the level of education, changes in the economy can have an impact on employment rates. Data relating to education and employment may be difficult to analyze when there are external economic shocks. **Informal Economy:** Since a sizable percentage of jobs in Jharkhand may be in the unorganized sector, it is challenging to precisely record employment rates and circumstance

These limitations must be recognized even if the research on the relationship between education and employment in Jharkhand offers insightful information. Future research and successful policy interventions can be guided by an understanding of the intricacies and difficulties

present in the study. Understanding these limitations can also improve the analytical rigor and the findings' relevance to the region's job and educational issues.

### **Key findings**

**Employment and Education Have a Strong Correlation:** Better job prospects and lower unemployment rates are linked to higher educational attainment, underscoring the crucial role that education plays in economic mobility.

**Skills Mismatch:** A gap between educational outcomes and labor market demands is evident in the fact that many graduates lack the skills that employers demand. To close this gap, skill development and vocational training are crucial.

**Socioeconomic Barriers:** Access to high-quality education is severely hampered by poverty, cultural beliefs, and poor infrastructure, especially for underserved groups. Improving educational results requires addressing these obstacles.

**Impact of Teacher Quality:** The quality of education is negatively impacted by the lack of trained teachers, especially in rural areas. To improve learning environments, money must be spent on teacher retention and training.

**Importance of Community Support:** Promoting educational success and participation requires parental and community involvement. Better educational results may result from fortifying these ties.

**Government Role:** Improving educational programs and infrastructure requires efficient government funding and legislation. More sustainable solutions may result from multi-stakeholder collaboration.

### **Recommendations**

#### **ns**

The following suggestions are put up to enhance educational quality and lower unemployment rates in light of the research

findings about the relationship between education and employment in Jharkhand:

#### 1. Improve the Facilities for Education

**Invest in Schools:** Give money for school building and renovation top priority, especially in underprivileged and rural areas. Make certain that schools have the necessary resources, like clean water, labs, and libraries.

**Technology Integration:** To enhance learning outcomes and get students ready for the modern workforce, integrate technology into the classroom. Providing computers and internet connection is part of this.

#### 2. Curriculum in Line with Needs of the Job Market

**Vocational Training:** Collaborate with nearby firms to create and grow vocational training initiatives. Adapt curricula to incorporate soft skills, entrepreneurship, and technical abilities that are in high demand in the labor market.

**Frequent Curriculum Review:** Create a procedure for routinely revising academic programs to take into account evolving technology and labor market needs.

#### 3. Training and Development of Teachers

**Professional Development Programs:** To improve teachers' abilities and teaching strategies, implement ongoing professional development programs. Emphasize the use of technology in the classroom and contemporary pedagogical approaches.

**Rewards for Teaching in Rural Areas:** In order to alleviate the scarcity of talented teachers in rural and isolated places, provide incentives like housing or cash bonuses.

#### 4. Awareness and Involvement in the Community

**Encourage parental involvement in education** by supporting initiatives that help parents see the value of education and their part in assisting their children's education.  
**Awareness Campaigns:** To change cultural perceptions of education, run awareness

campaigns emphasizing the benefits of education and career training, especially for underrepresented groups.

#### 5. Support and Policy of the Government

**Specific Policies:** Create focused policies aimed at lowering obstacles to education and work, especially for marginalized groups including women, minorities, and low-income households.

**Public-Private Partnerships:** Encourage cooperation between the government, private sector, and academic institutions to generate employment possibilities and guarantee that curricula meet the demands of the market.

#### 6. Observation and Assessment

**Data Collection and Analysis:** Put in place a reliable system for gathering and examining information on employment trends and educational results. Utilize this information to guide program modifications and policy choices.

**Impact Assessments:** Evaluate educational programs on a regular basis to determine their efficacy and make required modifications in response to input and results.

### **CONCLUSION**

In an area like Jharkhand, where high unemployment rates continue to exist despite serious educational obstacles, the link between education and employment is essential for promoting economic development and enhancing quality of life. This study sheds light on a number of important aspects of the state's employment and educational dynamics.

First, the results emphasize that economic mobility and employment prospects are directly impacted by educational attainment. Nonetheless, there is a notable skills mismatch, suggesting that many recent graduates are ill-prepared for the demands of the labor market. Socioeconomic hurdles that impede access to high-quality education, especially for underprivileged people, exacerbate this disparity.

Outdated curricula, a lack of skilled teachers, and inadequate facilities all have an impact on the quality of education. Comprehensive approaches that place a high priority on funding for teacher preparation, instructional materials, and curriculum creation that satisfies industry demands are needed to address these problems.

Improving educational results requires active community engagement. Raising parental awareness and participation can help change cultural perceptions of education and make it a family priority. Strong public-private partnerships and government policies are also necessary to establish an environment that promotes employment and education.

To sum up, strengthening the link between education and work in Jharkhand necessitates a comprehensive strategy that incorporates a range of stakeholders, including the government, educational establishments, corporations, and communities. Jharkhand may strive toward a workforce with greater education, lower unemployment, and eventually a more prosperous future for its citizens by putting targeted initiatives into place and encouraging cooperation.
